WORK EXPERIENCE

EdTech Creation

July. 2025 – Feb. 2026

Game Programmer Intern

Hongkong, Remote

Worked across multiple titles using Unreal Engine 5, focusing on UI architecture and core gameplay mechanics.

Project: Projectile Castle Game

- **Replay System:** Designed and implemented a full gameplay replay system, recording and reconstructing frame-by-frame actor states and projectile data.
- **Physics Visualization:** Built a trajectory prediction system using 3D math to render projectile paths in real-time, improving player feedback accuracy.
- **Network Replication:** Collaborated on multiplayer features, ensuring projectile logic and game states were correctly replicated across clients.

Project: Math Puzzle Game

- **Data-Driven Architecture:** Engineered a scalable level management system using JSON, allowing designers to modify level parameters without touching code.
- **UI Integration:** Developed complex dynamic UI utilizing UMG, binding data models directly to interface elements for real-time score and puzzle updates.

PROJECT EXPERIENCE

Nightfall Chronicles (2D Metroidvania RPG) | Unity, C#

- **RPG Progression Systems:** Architected a granular stat system (Defense, Elemental, Resources) and a branching skill tree including unlockable mechanics like "Time Echo" and "Domain Expansion."
- **Economy & Crafting:** Built an interaction system for Merchants (Buying/Selling) and Blacksmiths (Crafting/Storage), utilizing ScriptableObjects for inventory database management.
- **Persistence:** Implemented a robust Auto-Save and Checkpoint system using JSON serialization to store player location, inventory state, and unlocked upgrades between sessions.
- **State Machine Player Controller:** Programmed a responsive character controller handling complex movement states (Wall Sliding, Dashing, Jumping) and combat transitions.

Unreal Engine Projects | Unreal Engine 5, C++, Blueprints

- Developed modular Enemy AI using Behavior Trees, Blackboards, and perception-based agro states.
- Engineered an interface-based melee combat system supporting equipment logic and destructible environments.
- Designed a modular first-person interaction system and puzzle actors for environmental riddle-solving.

EDUCATION

Prestige Institute of Engineering Management & Research

May 2026

Bachelor of Technology, Computer Science

Indore, India

TECHNICAL SKILLS

- **Programming Languages:** C++ , C#
- **Game Engines:** Unreal Engine 5 , Unity
- **Engine Features & Tools:** Blueprints , UMG (Dynamic UI), ScriptableObjects
- **Gameplay Systems:** Network Replication , AI Programming , Data-Driven Architecture , 3D Math , Finite State Machines.
- **Additional Software:** Git & GitHub (Version Control), Visual Studio, Blender (CGI & VFX Art) [Art Demo](#)

CERTIFICATIONS & INTERESTS

- **Certifications:** Smart India Hackathon 2023, HackerRank Problem Solving
- **Interests:** Weightlifting; Traveling; Mountain Trekking;
